FAC16

Founders & Coders - March 2019 - present
16-week, intensive full-stack JS bootcamp

Value and enthusiasm for the following,

- **Pair-programming**: parking egos, shortlisting the most plausible concepts and dissembling the problem into its functional parts.

- **Design**: moodboarding, prototyping and defining a design schema. Informed directly from beginning and throughout by user stories and client feedback.

- **Clean code**: DRY readable code that is consistent with industry and project-specific conventions. Functional approach consistent with ES6 industry standards.

- **Goal-orientated**: Scoping an achievable MVP and prefiguring the architecture. Breaking it down into a series of sprints and delivering on that which is set out.

- **Empathy**: Appreciation for the different ways problems can be presented and successfully communicated to others.

- **Humility**: Motivated by my shortcomings and that which I do not yet know. Always looking to improve upon myself.

TECHNOLOGIES

HTML5, CSS3, JavaScript, Node.js,
Jest, Tape, Supertest,Travis,
React, Express.js, Handlebars
